FBG-1000 LIQUI-GEL
•PRODUCT BULLETIN•

Product Description

Over time, grease, food particles, and other organics build up in drains and pipes leading to slow drainage, odors, and can even attract insects. Harsh chemicals are available to blast away this build-up and kill drain flies but these products can be caustic and treat only the symptom, not the root cause of the problem.

FBG-1000 Liqui-Gel is a thickened biological formula that will coat drains and cling to the walls of the pipes, allowing the bacteria to continuously digest any build-up. By eliminating this decomposing material, drain flow is improved, odors drastically reduced, and costly blockages prevented.

Form:.....Thickened liquid
Color:.....Green
Fragrance:.....Fresh
Nutrient Content:.....Surfactants, Micronutrients, Biological Enhancers

Directions for Use:

If the drain is not used on a regular basis, pre-moisten with one gallon of warm water before beginning treatment,

For best results always apply at night or other period of lowest use to allow maximum retention time.

Apply 6-8oz of **FBG-1000 Liqui-Gel** to each drain, pouring around the edges to ensure that the formula coats all sides of the pipe. Repeat daily for the first week as an initial dosage and then every one to two weeks for continued maintenance.

Drains with a heavy crust of scum and build-up should be cleaned with a brush before treatment is started. Follow this with regular applications of **FBG-1000 Liqui-Gel** to prevent the build-up from recurring.

MADE IN THE U.S.A.
